This digital monochrome printer complies with the requirements of the EC Directive 89/336/EEC, 73/23/EEC, 93/42/EEC and 93/68/EEC.

The electro-magnetic susceptibility has been chosen at a level that gains proper operation in residential areas, on business and light industrial premises and on small-scale enterprises, inside as well as outside of the buildings. All places of operation are characterised by their connection to the public low voltage power supply system.
WARNING:
In the USA or Canada, use the AC power cord according to the recommendations as below, in order to comply with UL2601-1 and CAN/CSA C22.2 No. 601.1.

Case 1. Connect to the 120V receptacle of the room or the host equipment.
   The AC power cord should be UL or CSA approved and consist of type SJT, size 16 or 18AWG, length 2.5m or shorter cord with IEC320/C13 type, 125V 10A or higher rating connector and NEMA 5-15 type, 125V 10A or higher rating, Hospital Grade plug.

Case 2. Connect to the 230V receptacle of the room or the host equipment.
   The AC power cord should be UL or CSA approved and consist of type SJT, size 16 or 18AWG, length 2.5m or shorter cord with IEC320/C13 type, 250V 10A or higher rating connector and NEMA 6-15 type, 250V 10A or higher rating, Hospital Grade plug.

Case 3. Connect to the 120V receptacle of the host equipment.
   The AC power cord should be UL or CSA approved and consist of type SJT, size 16 or 18AWG, length 2.5m or shorter cord with IEC320/C13 type, 125V 10A or higher rating connector and IEC320-2.2/E type, 125V 10A or higher rating plug.

Case 4. Connect to the 230V receptacle of the host equipment.
   The AC power cord should be UL or CSA approved and consist of type SJT, size 16 or 18AWG, length 2.5m or shorter cord with IEC320/C13 type, 250V 10A or higher rating connector and IEC320-2.2/E type, 250V 10A or higher rating plug.

CAUTION:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

NOTE:
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his or her own expense.

Information:
This class A digital apparatus complies with Canadian ICES-003.

"CLASSIFIED BY UNDERWRITERS LABORATORIES INC.®
WITH RESPECT TO ELECTRIC SHOCK, FIRE AND MECHANICAL HAZARDS ONLY IN ACCORDANCE WITH UL2601-1 AND CAN/CSA C22.2 No. 601.1"
CAUTION:

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

The “Caution, hot surface” symbol indicates that the marked item may be hot and should not be touched.

The “ON/OFF” symbol indicates connection to or disconnection from the mains, at least for mains switches.

The “Equipotentiality” symbol identifies the terminals connected each other. The potential of various parts of equipment or of a system is equalized.

The “Alternating current” symbol indicates that the equipment is suitable for alternating current only.

When you dispose of the unit or accessories, you must obey the law in the relative area or country and/or regulation in the relative hospital.
WARNING:
Install and use this appliance in accordance with the operation manual for safety and EMC (Electromagnetic Compatibility). If it is not installed and used in accordance with the operation manual, it may cause interference to other equipment and/or other risk.

To prevent fire or shock hazard, do not expose this appliance to rain or moisture.

This appliance must be earthed.

In Europe, use the AC power cord according to the recommendations as below, in order to comply with EN60601-1 and EN60950.
Connect to the 230V receptacle of the room or the host equipment.
The AC power cord should be VDE approved and consist of core size 1mm² or bigger, length 2.5m or shorter cord with IEC320/C13 type, 250V 10A or higher rating connector and CEE(7)VII type or IEC 320-2.2/E type, 250V 10A or higher rating plug.

Use the USB cable according to the recommendations as below, in order to comply with EN60601-1-2.
The USB cable with appropriate plug should be 2 m long or shorter, comply with USB 2.0 standard High speed requirements and USB IF (USB Implementers Forum) approved.

This product is to be employed with medical equipment, just for reference purpose, not for medical diagnostic purpose.
INSTRUCTIONS FOR MEDICAL USE  
<according to the Medical Safety/EMC standard IEC/EN 60601-1-2>

MEDICAL ELECTRICAL EQUIPMENT needs special precautions regarding EMC and needs to be installed and put into service according to the EMC information provided in the ACCOMPANYING DOCUMENTS. Portable and mobile RF communications equipment can affect MEDICAL ELECTRICAL EQUIPMENT.

WARNING:
The use of ACCESSORIES, transducers and cables other than those specified, with the exception of transducers and cables sold by the manufacturer of the Model P93DW/P93DE as replacement parts for internal components, may result in increased EMISSIONS or decreased IMMUNITY of the Model P93DW/P93DE.

WARNING:
The Model P93DW/P93DE should not be used adjacent to or stacked with other equipment and that if adjacent or stacked use is necessary, the Model P93DW/P93DE should be observed to verify normal operation in the configuration in which it will be used.
### Guidance and manufacturer’s declaration - electromagnetic emissions

The Model P93DW/P93DE is intended for use in the electromagnetic environment specified below. The customer or user of the Model P93DW/P93DE should assure that it is used in such an environment.

**NOTE** $U_T$ is the a.c. mains voltage prior to application of the test level.
Guidance and manufacturer's declaration - electromagnetic immunity

The Model P93DW/P93DE is intended for use in the electromagnetic environment specified below. The customer or user of the Model P93DW/P93DE should assure that it is used in such an environment.

<table>
<thead>
<tr>
<th>Immunity test</th>
<th>IEC/EN 60601 test level</th>
<th>Compliance level</th>
<th>Electromagnetic environment - guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conducted RF</td>
<td>IEC/EN 61000-4-6</td>
<td>3 Vrms 150 kHz to 80 MHz</td>
<td>Portable and mobile RF communications equipment should be used no closer to any part of the Model P93DW/P93DE, including cables, than the recommended separation distance calculated from the equation applicable to frequency of the transmitter.</td>
</tr>
<tr>
<td>Radiated RF</td>
<td>IEC/EN 61000-4-3</td>
<td>3 V/m 80 MHz to 2,5 GHz</td>
<td>Recommended separation distance $d=1,2\sqrt{P}$</td>
</tr>
</tbody>
</table>

$\frac{d}{\sqrt{P}} = \begin{cases} 1,2 & \text{80 MHz to 800 MHz} \\ 2,3 & \text{800 MHz to 2,5 GHz} \end{cases}$

where $P$ is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and $d$ is the recommended separation distance in meters (m).

Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey, should be less than the compliance level in each frequency range.

Interference may occur in the vicinity of equipment marked with the following symbol:

NOTE1. At 80 MHz and 800 MHz, the higher frequency range applies.

NOTE2. These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

a Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the Model P93DW/P93DE is used exceeds the applicable RF compliance level above, the Model P93DW/P93DE should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the Model P93DW/P93DE.

b Over the frequency range 150 kHz to 80 MHz, field strength should be less than 3 V/m.
Recommended separation distances between Portable and mobile RF communications equipment and the Model P93DW/P93DE

The Model P93DW/P93DE is intended for use in the electromagnetic environment in which radiated RF disturbances are controlled. The customer or user of the Model P93DW/P93DE can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the Model P93DW/P93DE as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated maximum output power of transmitter W</th>
<th>Separation distance according to frequency of transmitter m</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>150 kHz to 80 MHz</td>
</tr>
<tr>
<td></td>
<td>d=1,2√P</td>
</tr>
<tr>
<td>0,01</td>
<td>0,12</td>
</tr>
<tr>
<td>0,1</td>
<td>0,38</td>
</tr>
<tr>
<td>1</td>
<td>1,2</td>
</tr>
<tr>
<td>10</td>
<td>3,8</td>
</tr>
<tr>
<td>100</td>
<td>12</td>
</tr>
</tbody>
</table>

For transmitters rated at maximum output power not listed above, the recommended separation distance d in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where P is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

NOTE1. At 80 MHz and 800 MHz, the separation distance for higher frequency range applies.

NOTE2. These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

2 PRECAUTIONS

In the interest of safety, please observe the following precautions:

**POWER REQUIREMENT**
This digital monochrome printer is designed for operation on 100-240V AC 50/60Hz. Never connect to any outlet or power supply having a different voltage or frequency.

**WARNING:** THIS APPARATUS MUST BE EARTHED.
AVERTISSEMENT : CET APPAREIL DOIT ETRE MIS A LA TERRE.
This equipment is classified as class I, according to the type of protection against electric shock.

**PROTECTIVE MEASURES**

**IF ABNORMALITIES ARISE, . . .**
Use of the unit during emission of smoke or abnormal sounds (without adopting countermeasures) is dangerous. In such a case, unplug the power cord from the source outlet immediately, and request maintenance services from the sales dealer.

**NEVER INSERT ANY OBJECT INTO THE UNIT**
Foreign objects of any kind inserted into this unit constitute a safety hazard and can cause extensive damage. If any object should be inserted into the unit, unplug the power cord, then contact the sales dealer.

**DO NOT REMOVE THE CABINET**
Touching internal parts is dangerous or may lead to malfunction. Contact the sales dealer to carry out internal checks and/or adjustments. Before opening the cover to clear a paper jam, etc., be sure to disconnect the power cord plug.

**DO NOT ATchin a : 6 MM LONG ON THE BOTTOM**
If a screw more than 6 mm long is attached on the bottom of the printer, it may cause internal damage.

**PROTECT AGAINST DEW FORMATION**
In extremely cold regions, if the unit is moved quickly from an extremely cold place to a warmer one, dew is likely to be formed. If dew is formed, printing is not possible.

**OPERATING AMBIENT TEMPERATURE RANGE**
The operating ambient temperature range is 5°C-40°C (41°F-104°F), and humidity of 20-80%.

**BE CAREFUL AROUND PRINT PAPER EXIT SLOT**
Do not insert your hand or any material into the paper exit slot during printing. Do not touch the cutter blade inside the paper exit slot. Otherwise, your finger will be injured.

**DO NOT TOUCH THE THERMAL HEAD AND CUTTER**
Do not touch the thermal head (located inside the unit) and the cutter blade. The thermal head is heated to high temperature. This may cause injury.

**IF ABNORMALITIES ARISE, . . .**
Use of the unit during emission of smoke or abnormal sounds (without adopting countermeasures) is dangerous. In such a case, unplug the power cord from the source outlet immediately, and request maintenance services from the sales dealer.

**NEVER INSERT ANY OBJECT INTO THE UNIT**
Foreign objects of any kind inserted into this unit constitute a safety hazard and can cause extensive damage. If any object should be inserted into the unit, unplug the power cord, then contact the sales dealer.

**DO NOT PLACE ANYTHING ON THE UNIT**
Heavy objects placed on the unit can cause damage or obstruct proper ventilation.

**PROTECT THE POWER CORD**
Damage to the power cord may cause fire or shock hazard. When unplugging, hold by the plug only and remove carefully. Never put heavy objects on the power cord. The cord may be damaged causing a fire or electric shock.

**DO NOT PLACE WATER CONTAINERS ON THE UNIT**
Do not place flower vases, and other water-holding containers on the unit. If, for some reason, water seeps to the inside of the unit, unplug the power cord from the source outlet, and contact the sales dealer. If used without corrective measures, the unit may be damaged.

**DO NOT TOUCH THE THERMAL HEAD AND CUTTER**
Do not touch the thermal head (located inside the unit) and the cutter blade. The thermal head is heated to high temperature. This may cause injury.

**INSTALLATION LOCATIONS**

**MAINTAIN GOOD VENTILATION**
Ventilation slots and holes are provided on sides of this unit. Place the unit on a hard and level surface and locate at least 4" (10cm) from walls to ensure proper ventilation.

**UNSUITABLE LOCATIONS**
Avoid shaky places or hot-springs areas where hydrogen sulfide and acidic ions are likely to be generated.

**PLACES WITH HIGH HUMIDITY AND DUST**
Do not place the unit at locations with high humidity and/or dust. They can cause extensive damage. Avoid places where the unit is likely to contact oily fumes and vapors.

**PLACES LIKELY TO BE EXTREMELY HOT**
Places exposed to direct sunlight, or near heating appliances can attain extremely high temperatures, which may deform the cabinet, or can become a prime cause of damage.

**SET THE UNIT ON A FLAT SURFACE**
Do not use the unit when inclined ±20° in vertical or horizontal direction, or in an unstable place. Uneven surfaces may disturb paper feeding or ventilation, or affect the performance of the unit.
FOR LONG OPERATING LIFE

UNSUITABLE MATERIALS FOR THE UNIT
Many plastic components are used in the unit. Coat flaking and deformation are likely to occur if the unit is wiped with chemical dusters, benzine, thinner or any other solvent, if rubber or PVC items are left in contact with the unit for extended duration, or if the unit is sprayed with insecticide.

CARE OF THE CABINET
Unplug and clean with a soft cloth slightly moistened with a mild soap and water solution. Allow to dry completely before operating. Never use petroleum base solutions or abrasive cleaners.

HEAD ABRASION
The thermal head, like the video head, wears out. When it is abraded, it becomes hard to print out fine details of the picture. In such a case, it is necessary to replace the thermal head. Consult with the sales dealer for replacing the head.

WHEN A DEFECT IS FOUND
If you detect smoke or other smell from the unit, disconnect immediately the power cord plug from a wall socket and ask the agent for repair. It may be dangerous to operate the unit under these conditions.

CONNECTION DEVICES
Read thoroughly "Operating Precautions" of the instruction booklets for the devices connected with the digital monochrome printer. Do not disconnect the power cord during printing.

CAUTION ON RELOCATING
When transporting this unit, make sure it is not likely to be subjected to impacts. They can be a prime cause for damage. Further, make sure to disconnect the power cord from the power outlet, and the cables from the connected devices.

UNPLUG THE POWER CORD DURING A LONG ABSENCE
Turn off the MAIN power switch and unplug the power cord during a long absence.

THERMAL PAPER

- Thermal papers listed in the page of SPECIFICATIONS are available.
- When the remaining length of the paper is about 10" (25cm), a color belt appears at the paper end. Prepare for replacement of the paper. If the remaining paper length is less than 10" (25cm), printing becomes uneven due to the uneven paper core surface.
- When the Printed paper is touched by wet hand, the print may be discolored.
- When the paper runs out during printing, the printing operation stops and "EP" is displayed by the indicator on the front panel. Install new paper at this time.
- Store the printed paper in a place with low humidity free from a direct sunlight.
- If the paper absorbs non-volatile organic solvents (alcohol, ester, katone, etc.) the print may be discolored. Particularly, if the paper comes in contact with soft vinyl chloride such as a transparent tape, it quickens discoloration.
- Do not use paper other than the specified types.
- Immediately after the paper is replaced, 2-3 images may be printed with a blank part due to hand's dust or oil.
- Avoid direct sunlight or places near heaters, etc., and store the paper in a place with 30°C (86°F) or lower temperature and 35-80% RH.
- When the paper is rapidly transferred from a cool place to a hot place, a vapor or a dew is generated on the paper surface causing paper jam or degraded printing quality.
- A finger print or dust on the paper surface may degrade the printing quality.

Note:
Mitsubishi brand thermal paper is specially treated with an anti-static coating against thermal head damage caused by static-electricity discharge. The use of non-treated paper may cause premature head failure in your product.
SAFETY TECHNICAL CHECKS

Periods: According to the recommendations of the manufacturer of medical device.
Scope: a) Visual check
   Housing, cables, operator controls, readout device (displays, LED etc.), labels,
   accessories, instruction manual.
   b) Function test
   Performance check acc. instruction manual, also unity and applicability of set
   and accessory test.
   c) Electrical check
   Safety electrical test of the configuration in accordance with EN60601-1.

“In the interest of safety, avoid the handling of liquids beside the set.”

RESPONSIBILITY OF THE MANUFACTURER

The manufacturer, assembler, installer or importer considers himself responsible for the
effects on safety, reliability and performance of the EQUIPMENT only if:
– assembly operations, extensions, re-adjustments, modifications or repairs are carried out
   by persons authorized by him, and
– the electrical installation of the relevant room complies with the IEC requirements
– the EQUIPMENT is used in accordance with the instructions for use.

• Any service after expiration of the warranty period will be chargeable. Consult your dealer
  for advice.

TECHNICAL DESCRIPTION

The supplier will make available on request such circuit diagrams, component part lists,
descriptions, calibration instructions or other information which will assist the USER’s ap-
propriately qualified technical personnel to repair those parts of the EQUIPMENT which
are classified by the manufacturer as repairable.

The use of ACCESSORY equipment not complying with the equivalent safety requirements
of this equipment may lead to a reduced level of safety of the resulting system. Consider-
ation relating to the choice shall include:
– use of the accessory in the PATIENT VICINITY
– evidence that the safety certification of the ACCESSORY has been performed in accor-
dance to the appropriate EN60601-1 and/or EN60601-1-1 harmonized national standard.

The transportation and storage environmental conditions are:
Temperature : -20°C - +60°C (-4°F - +140°F)
Humidity : 90%RH or less at 40°C (104°F)
Note : The above transportation environmental conditions indicate the storage environ-
mental conditions during transport.
# 3 UNPACKING

Take the unit out of the box by the following procedures. Make sure to check the contents.

Moisture, fingerprints or dust on the paper surface may cause a noise at printing or deterioration in print quality. Set the paper by the following procedure to prevent adhesion of fingerprint or dust on the paper surface.

1 Open the door.
   - Switch the lever located on the left side to the “OPEN” position.
   - The door opens.

2 Load the paper roll.
   - Place the paper roll in the printer.

3 Pull out the paper end.
   - Pull out the first 15-20 cm (6 in. - 9 in.) of the paper to remove any slack in the roll.

4 Close the door.

5 Cut the paper end.
   - Cut the paper end with the cutter by pulling the paper upwards against the cutter blade.

Note: The printing surface is the outside. Place the paper with the thermosensitive side (printing side) up. When the paper roll is placed inversely, images can not be printed.
When setting the paper, observe the following precautions to prevent paper jam.

Do not use defective paper.

- Do not use bent or wrinkled paper.

Adjust the paper position correctly.

- When the paper is fed out skewed from the print exit, adjust the paper position so that it is fed out straight.

Do not allow slack in the paper roll.

- Set the paper tightly to remove any slack.

If the side of the print paper is uneven or the core is sticking out, the amount of paper feeding after printing may vary.

When the side of paper is uneven or the core is sticking out, install the print paper after making the paper side even.

The core is sticking out.

The paper is uneven.

INCORRECT

CORRECT

CAUTION

- Keep the high-density paper away from fingerprint, dust or moisture when storing it.
- Do not touch the rubber roller. Do not stain or damage the roller surface.
- Do not touch the thermal head (located behind the cutter). When printing, the thermal head is heated to high temperature.
- Do not touch the cutter blade.
Connecting to various equipment with USB interface such as medical equipment and personal computer.

**Connection**

Connect the digital monochrome printer with PC or medical equipment through a USB cable.

**Setting of Switches**

Set the DIP switches on the rear panel.

- When setting the switch No. 1 to ON, DOWN, UP, and LOCK buttons will be locked. (The functions will not be available.) At this time, the LOCK indicator illuminates.
  - Set the switches other than No. 1 to OFF.

**Installing printer driver**

Printer driver is required to print the data from a personal computer connected with this printer.

The printer driver for Windows®2000/XP is supplied with this printer.

Refer to the "Read me" for installing the printer driver in the CD-ROM supplied with this unit.

1. **How to open the ReadMe file**

   1. Install the CD-ROM in the CD-ROM drive on your PC.
   2. Double-click on the CD-ROM icon.
   3. Double-click on the ReadMe_E.pdf.
      - Adobe® Reader® or Adobe® Acrobat Reader® is required to open ReadMe_E.pdf file.
   4. Install the printer driver by following the instruction in the file.

Microsoft® Windows®2000, and Windows® XP are the registered trademarks of Microsoft Corporation in the U.S.A and other countries.
Adobe, Acrobat Reader and Adobe Reader are registered trademark of Adobe Systems Incorporated.
7 PRINTING

1 Turn on the power.
   - Press the POWER switch to turn on the power.

2 Print a picture displayed on the screen.
   - Print a picture with an application software. The image data is transferred through USB interface.

3 Cut the printed paper.
   - Cut the printed paper with the cutter by tearing off the paper in the upper right direction.

   - Do not pull the paper in the horizontal direction. The paper inside the unit may be displaced and printing may not be carried out correctly.

Copy Printing

- You can set the number of copies by pressing the COPY button on the front panel. (Setting range: 1 to 200)
  
  You can copy the same picture as many times as you desire until a new image data is printed.

- The set number of copy printing and the number of the remainings are displayed on the indicator as shown right.

- The number of copy print setting is not memo-

- When pressing the UP button during copy printing, continuous printing is available.

Cancel of Copy Printing

- When pressing the FEED button during copy printing, the copy printing is cancelled upon completion of the current copy.

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Number of copy printing / remainings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 99</td>
<td>1 - 99</td>
</tr>
<tr>
<td>00 - 99</td>
<td>100 - 199</td>
</tr>
<tr>
<td>0.0</td>
<td>200</td>
</tr>
<tr>
<td>CC</td>
<td>Continuous printing</td>
</tr>
</tbody>
</table>
Paper Feeding

- To feed the paper, press the FEED button on the front panel.

Precautions on Printing

- When dark pictures are printed consecutively, the digital monochrome printer may become overheated and the indicator blinks. In this case, wait for a while until the unit has cooled down.
- Avoid pulling out or holding the paper during printing or copying to prevent paper jam. Do not touch the paper until printing or copying finishes.
8 ADJUSTMENT OF PRINT PICTURE

Adjustment of Printer Brightness/Printer Contrast

You can make fine adjustment of printer brightness and printer contrast of the printed picture.

Control panel

- For adjustment, use the BRT/CONT button "BRT/CONT", UP button "UP" and DOWN button "DOWN".

1 Press the BRT/CONT button.

- Press the BRT/CONT button "BRT/CONT" once to adjust the printer brightness.
  - The BRT indicator lights up.

- Press the BRT/CONT button "BRT/CONT" twice to adjust the contrast.
  - The CONT indicator lights up.
<table>
<thead>
<tr>
<th>2 Change the setting.</th>
<th>3 Store the set value.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>UP</strong> ▲</td>
<td>• Press the <strong>UP</strong> button to increase the value.</td>
</tr>
<tr>
<td><strong>DOWN</strong> ▼</td>
<td>• Press the <strong>DOWN</strong> button to decrease the value.</td>
</tr>
</tbody>
</table>

- The setting value is displayed by the indicator.

(example)

- Setting range is -19 to +19.

- By pressing the **BRT/CONT** button again, the setting value is memorized.
- The memorized value will not be lost even when the power is turned off.
Automatic restoration to the standby status from the adjustment or setting mode

- When left without any operation of buttons, and switches under the following conditions for more than 20 seconds, this unit automatically returns to the standby status (Indicator display : \( \text{\textbullet} \)).
  In this case, the newly set value is not memorized and the setting goes back to the value that was set before change.
  - While adjusting the printer brightness or printer contrast

Resetting the values

- You can reset the values of printer brightness and printer contrast.
  1. Turn off the power.
  2. While pressing the FEED button, turn on the power.
  3. The display by the indicator changes from \( \text{\textbullet} \) to \( \text{\textbullet} \), and the values are reset to the default setting.

Locking the button functions

- You can lock the function of UP and DOWN buttons on the control panel.

To lock the button functions

1. Hold the LOCK button for approx. 1 second until a "Peep" sounds.
2. The functions of UP and DOWN buttons are locked and the LOCK indicator illuminates.
   - When the UP or DOWN button is pressed on this status, "\( \text{\textbullet} \)" is displayed on the indicator. Whenever the BRT/CONT buttons is pressed, each set value of brightness and contrast can be checked.

To unlock the button functions

1. Hold the LOCK button for approx. 1 second until a "Peep" sounds.
2. The functions of UP and DOWN buttons are unlocked and the LOCK indicator goes off.

If the DIP switch No. 1 is set to ON, this function is not available. (The LOCK button becomes invalid.)
In case of an error in the unit during operation, you are warned by an alarm tone or the LED indicator.

**USE OF CLEANING PAPER**

When the thermal head is dirty with dust, etc., white spots or stripes may appear on the print. In this case, clean the thermal head by the following procedure BY USING THE SUPPLIED CLEANING PAPER.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| 1    | Turn on the power.  
   - Press the **POWER** switch to turn on the power. |
| 2    | Open the door.  
   - Switch the left side lever to the **OPEN** position.  
   - The door opens. |
| 3    | Insert the cleaning paper.  
   - Roll the cleaning paper and install into the set.  
   - Adjust the red mark on the cleaning paper parallel to the platen roller.  
   - **Cleaning paper**  
   - **Platen roller**  
   - **Red mark** |
| 4    | Close the door.  
   - Close the door without taking out the cleaning paper. |
| 5    | Press the **FEED** button.  
   - Keep pressing the **FEED** button until you hear a beep. |
| 6    | Take out the cleaning paper.  
   - Open the door.  
   - Take out the cleaning paper.  
   - **Do not pull out the cleaning paper while the door is closed.** |
| 7    | Repeat the steps 3-6 by 2 or 3 times, and print 1-2 sheets to verify the cleaning effect. |

**CAUTION**

- It is recommended that after printing 10 rolls of paper the unit be cleaned using the supplied cleaning paper.
- If the symptom of the dirty head is not corrected even after cleaning, your set needs repairing, contact your dealer.
- Do not pull out the sheet and the cleaning paper while the door is closed.  
  This may cause extensive damage to the unit.
- Never use other cleaning papers. It may cause damage to the thermal head.
- This cleaning paper should be used only for cleaning the thermal head. Do not use it for other purpose.
Turn off the power for maintenance.

## Maintenance of Main Unit

Wipe off stains of the front panel with a soft cloth. When the panel is heavily stained, wipe with a cloth moistened with neutral cleanser diluted by water and finish with a dry cloth.

## Maintenance of Rubber Roller

When the rubber roller is dirty with dust, etc., a blank spot may appear on the print. In this case, eliminate the dust on to the rubber roller with a blower or a brush. The regular cleaning using a lint-free cloth, etc., which is moistened with ethyl alcohol is recommended.

![Rubber roller](image)

## Cleaning of Thermal Head

When the thermal head is dirty with dust, etc., white spots or stripes may appear on the print. In this case, clean the thermal head according to "11. USE OF CLEANING PAPER".

Note: After installation of new roll of paper, dust on the paper will generally require 2 to 3 prints to be made before the dust is eliminated.
